Adobe Flash, Flex
MS Office, Project, Visio
MS Project
Red Gate SQL Compare

PERSONAL PROFILE

I have used computers in some capacity for over 20 years and have been professionally involved in website design, graphic design and web application development since 1997. My broad range of skills includes client and server side coding, graphic design, user interface design and project management.

My primary strengths are adaptability and client interaction. I am capable of quickly transitioning from code to graphic design to project management to customer support. I enjoy translating complex client needs into intuitive user interfaces and functional software systems. I truly enjoy my work and try to constantly update my knowledge and skills. My work has been featured in popular blogs such as AppScout and Lifehacker.

TECHNICAL & DESIGN SKILLS

I possess excellent skills in hand-coded XHTML, object oriented PHP, CSS, MySQL and JavaScript. I have four years of experience with ASP and VB, .NET architecture, Flash, Flex and Action Script, PERL, ColdFusion, AJAX, MS SQL and the Visual Studio development environment. I am proficient with unobtrusive JavaScript techniques and a multitude of JavaScript application frameworks including Prototype/Scriptaculous, ExtJS and jQuery.

I am highly proficient with Photoshop and the Eclipse open source development environment. Familiar with Illustrator, Free Hand, Dreamweaver and Fireworks. I have experience creating online tools including calendars, optimized database searches against large and complex data stores, secure login systems, dynamic charting, PDF and image creation on the web, user forums, content management systems, shopping carts and e-merchant account integration. Experienced with code versioning and repository systems including Subversion and the Tortoise Subversion UI. I have been gaining experience and proficiency with the Adobe AIR desktop application technology since early 2007.

CAREER HISTORY

The Teaching Research Institute - October 2004 to Present
Lead Web Developer

Responsibilities include:

- Translating grant and client needs and requests into functional specifications.
- Advising the organization, its internal and external clients on web technology options and costs.
- Writing functional specifications for grant proposals.
- Developing websites, secure intranets, web-based applications and network aware desktop applications using a wide variety of server/client technologies.
- Designing graphic assets for the organization and its clients such as logos, brochures and other marketing material.
- Presenting demonstrations of work product to clients and other interested parties.

UpStart Productions - November 2000 to Present
Founder, Lead Web Developer & Consultant

I oversaw all aspects of maintaining a web consultancy including sales, development, customer support and sub-contractor management.
